

Alfa Laval Unique RV-ST

Regulating valves

Introduction

The Alfa Laval Unique RV-ST Regulating Valve is the third generation of the Alfa Laval single-seat regulating valve designed to meet the highest process demands of hygiene and safety. Built on a well-proven platform from an installed base of more than a million valves, it is ideal for high-volume, hygienic liquid processing applications that require precision control of flow rate or pressure.

RV-ST has a vast range of Kv-values to fit customers exact needs. 1½"-4" sizes come with a plug seal to also function as a shut-off valve, where 1" sizes do not have a plug seal.

Application

This pneumatic single-seat regulating valve is ideal for use as a hygienic product valve in the dairy, food, beverage, chemical, pharmaceutical and many other industries.

Benefits

- Reliable, automated performance
- Versatile, modular design
- Outstanding precision flow
- Easy to maintain
- Large operating range

Standard design

The Alfa Laval Unique RV-ST Regulating Valve with positioner consists of valve body, valve stem, EPDM plug seal, actuator with advanced electro-pneumatic process controller, and stem bushings threaded to the actuator shaft. The control unit comes in two versions: with or without display.

Working principle

The Alfa Laval Unique RV-ST Regulating Valve is controlled from a remote location by means of a digital electro-pneumatic process controller. Few straightforward moveable parts ensure reliable operation.

Certificates

 Authorized to carry the 3A symbol

TECHNICAL DATA

Pressure

Max. product pressure:	10 bar (1000 kPa)
Min. product pressure:	Full vacuum
Air pressure:	5 - 7 bar (500 to 700 kPa)

Temperature

Temperature range:	-10°C to +140°C (EPDM)
--------------------	------------------------

Positioner data

Supply voltage:	24 VDC +/- 10%
Working temperature:	0 to 55 °C
Push-in fittings:	ø6mm or 1/4"
Protection class:	IP65 and IP67
Position detection module:	Contact-free, wear-free
Communication:	Analog

8692 Positioner – Top control with display

Setpoint setting:	0/4 to 20mA and 0 to 5 5/10V
Output resistance:	0/4 to 20 mA: 180Ω 0 to 5/10V: 19Ω
Power consumption:	< 5W
Cable gland:	2xM16x1,5 (cable-ø10mm)
Max. wire diameter:	1.5 mm ²

8694 Positioner – Basic control without display

Setpoint setting:	0/4 to 20mA
Output resistance:	180Ω
Power consumption:	< 3,5W
Cable gland:	2xM16x1,5 (cable-ø10mm)
Max. wire diameter:	1.5 mm ²

PHYSICAL DATA

Materials

Material:	PPS, stainless steel
Cover:	PC
Seals:	EPDM
Product wetted steel parts:	1.4404 (316L)
External finish:	Semi-bright (blasted)
Internal finish:	Bright (polished), internal Ra < 0.8 µm
Other steel parts:	1.4301 (304)
Plug seal:	EPDM (optional HNBR or FPM)
Other product wetted seals:	EPDM (optional HNBR or FPM)
Other seals:	NBR

Valve Body Combinations

Other valves in the same basic design

- Unique Single Seat
- Standard valve
- Reverse acting valve
- Long stroke valve
- Manually operated valve
- Aseptic valve

Options

- Male parts or clamp liners in accordance with required standard
- Product wetted seals in HNBR or FPM
- Maintainable actuator

- External surface finish blasted
- Optional plug seal: HNBR or FPM (Not relevant for 1" / DN25 sizes)

Note! For further details, see instruction manual.

Valve Sizing

Flow Coefficients (Kv)

The following formula and flow coefficient values enable you to select the correct regulating valve for your application.

Formula for water and other products with a specific gravity equal to 1.0:

$$Kvq = \frac{Q}{\sqrt{\Delta P}}$$

Formula for products with a specific gravity other than to 1.0:

$$Kvq = \frac{Q}{\sqrt{\Delta P/SG}}$$

Where:

Q =Product flow rate in m³ per hour

SG =Specific gravity of product

Δ P = Pressure drop across valve in bar

(inlet pressure minus outlet pressure)

Example of Kv Calculation:

Determine the proper size valve for 60 m³ per hour of water.

Inlet pressure of 3 bar

Outlet pressure of 1,5 bar

Solution: Inlet pressure (A) minus outlet pressure (B):

$$\Delta P = 3 \text{ bar} - 1,5 \text{ bar} = 1,5 \text{ bar}$$

$$Kvq = \frac{60}{\sqrt{1,5}} = 49$$

How to Use Data to Select Valve Size

After the Kv factor for a specific application has been calculated, locate the factor on the following diagrams. Choose the curve closest to the 50% stroke.

Using the above example, refer to the chart on the following diagrams you will find that the Kv factor (49) is marked on the chart. You will find that a 2" valve crosses 1 Kv curve, 2½" 1 curve, 3" 3 curves and 4" 3 curves. The correct valve size to use is 2"

because Kv 49 crosses the curve closest to the optimum operating point 50%. Alternatively the 4" valve is also close to the 50%.

Pressure drop/capacity diagrams

For $\Delta P = 100 \text{ kPa}$ (1bar)

Figure7. Valve size ISO 4"/DN100

* Recommended working area

Note! For the diagrams the following applies

Medium: Water (20° C)

----- (dotted line) = Kv 49

Alfa Laval recommend max. flow velocity in tubing and valves to be 5 m/sec.

Pressure data

Shut-off valves

Max. pressure in bar without leakage at the valve seat

Actuator / Valve body combination and direction of pressure	Air pressure [bar]	Plug position	Valve size [mm]				
			DN40/38	DN50/51	DN65/63.5	DN80/76.1	DN100/101.6
	6	NO	7.60	9.60	5.60	7.20	4.80
		NC	6.29	7.20	4.20	6.40	4.20

A = Air
 P = Product pressure
 AC = Air closes
 SC = Spring closes
