

Unique SSV single seat valves

The modular basic design of Alfa Laval Unique SSV single seat valves centres round a body deep-drawn from one single stainless steel disc, an efficient double-acting lip seal design that minimizes any risk of cross-contamination, and a valve plug with enhanced CIP (cleaning-in-place) capabilities.

You can also combine different configurations with different types of actuator. This cost-effective modular design approach gives you the opportunity to build either shut-off or changeover valves, in either normally open/normally closed or reverse-acting configurations, to meet virtually any requirement.

The selection guide illustrates the many combinations of features and types available with the Unique SSV valve range. In addition, there are different sizes and standards to comply with the full spectrum of worldwide installation standards. As a result, you can always find a configuration to meet any specific requirement. For configuration of your exact requirement, please use CAS.
